

Mercury in Fish

Eating fish is good for you, right?

It can be. But some fish is high in mercury, a chemical that can cause serious health problems, especially for children and pregnant women.

If you are pregnant or planning to become pregnant, use this guide to see what amount of fish sold in grocery stores and restaurants is safe to eat.

Keep this card with you.

Refer to it when you go to restaurants or the grocery store to help you make healthy choices for you—and for the ocean.

**** Farmed salmon** may contain PCB's, chemicals with serious long-term health effects.

Information in this guide is based on averages from the FDA's test results for mercury in fish and the EPA's determination of safe levels of mercury for women of reproductive age. Some individual fish have mercury concentrations significantly higher than the average. For more details, see: www.nrdc.org/mercury.
